Institute of Innovation and Knowledge Management. INGENIO (CSIC-UPV)

Department / Institute / Centre

- **Name:** Institute of Innovation and Knowledge Management, INGENIO (CSIC-UPV)
- **Address:** Universitat Politècnica de València. INGENIO (CSIC-UPV) CPI | Edif 8E 4º | Camino de Vera s/n | 46022 Valencia (Spain)
- **Province:** Valencia

Research Area

- Social Sciences and Humanities (SOC)

Brief description of the institution:

INGENIO (CSICUPV) is a joint research center of the Spanish Council for Scientific Research (CSIC) and the Polytechnic University of Valencia (UPV), with more than 30 researchers from different professional fields, academic backgrounds and nationalities. In addition to research, INGENIO (CSICUPV) is also involved in teaching and training activities. As a joint CSICUPV research center, INGENIO provides a broad range of possibilities to develop research and teaching activities, supervise Masters/PhD students, and host visiting colleagues from around the world.

INGENIO's internal seminar series provides a collegial setting for presenting early drafts of new research, whilst we regularly organize national and international seminars, workshops and conferences in coordination

with other institutions and international research networks such as EUSPRI Forum, ENID, EURKIND, etc. We also host about 25 leading international researchers every year.

<http://www.ingenio.upv.es/en>

Brief description of the Centre/Research Group (including URL if applicable):

INGENIO (CSIC-UPV) invites international researchers who aim to develop their careers in the fields of **innovation, science and technology policy studies** and **human and sustainable development** through a Marie Curie funded action, to partner with INGENIO as their Host Institution. INGENIO has a track record of hosting Marie Curie Fellows and supporting their research and broader academic experience. As the prospective Host Institution, INGENIO can provide institutional support and professional assistance with the preparation and submission of the Marie Curie application.

INGENIO's research on science and innovation addresses five main interconnected areas.

Candidates are invited to draft proposals around topics within these areas:

1. **Analysis of knowledge generation and use.**
2. **The organization of innovation and research processes. Green technologies and social innovation processes.**
3. **The analysis and evaluation of science and innovation policies and activities.**
4. **Analysis of projects interventions, policies and institutions from a human and sustainable perspective.**
5. **Science, Technology and Society in the Early Modern period.**

Project description:

Profile: Science-society interaction and literary fiction

This profile seeks candidates interested in the two sides of public researchers' relation with literature: as authors and as objects of literary fiction.

On the one hand, public researchers that write literary fiction produce a non-standard contribution of public science to society, namely participation in the cultural core of citizens. To the extent that contents of their research are aligned with the contents of their literary fiction, the contribution of scientific authors to the dissemination of knowledge will be higher. Whether this contribution is local or not is key to understand pathways of regional science-society interaction.

On the other hand, public science-society interaction is often represented in literary fiction, i.e. when the characters contact public researchers to develop new discoveries. Representations of science-society interaction are heterogeneous and we aim to classify them along a number of theoretically-led literary and socioeconomic dimensions. The goal is to understand whether and in which ways literary fiction contributes to the dissemination of concepts about public science-society interaction among the general public.

The ideal candidate should have a background in Cultural Studies, Literature, History, Humanities or Philosophy, and be able to deal with quantitative and qualitative analysis, hence possessing computational skills, competences in database handling, etc.
